Introduction

Centuries ago, classical economist presented ideas designed to promote wealth and prosperity... ideas that provided the keys for unlocking the wealth of nations. Nations that promote these ideas prosper. Those that reject them do not. These ideas are as relevant today as they were centuries ago.

Classical principles stem from the belief that each individual has God-given rights to liberty and freedom form the foundation for key economic principles - free markets, limited government, individual property rights and a stable currency.

Individuals free from an oppressive authority and free to respond to market forces provide benefits not just for themselves and their families; they provide benefits that extend to their entire nation.

This book is about much more than a formula for economic success. It is also about policies designed to respect and promote human dignity.

Contents

Introduction	vii
Chapter 1 Origins of Classical Thought	1
Liberty and freedom form the basis for classical principles	2
The primary objective is to raise living standards	3
Chapter 2 Basic Principles	6
Who should make key economic decisions?	7
Chapter 3 Free Markets	10
Markets are extremely complex	11
Free markets make efficient use of resources	14
Alternatives to free markets	16
Chapter 4 Objections to Free Markets I: Inadequate Wages	18
Free markets fail to provide an adequate wage	19
A digression	21
Minimum wage laws harm the most vulnerable workers	24

Chapter 5 Objections to Free Markets II; More Objections	27
Free markets aren't really free	27
Free markets provide excessive rewards to the rich	28
Free markets produce an unfair distribution of income	30
Free markets are disruptive	32
Free markets encourage price gouging during emergencies	34
Free markets lead to recessions and depressions	35
Chapter 6 Low Tax Rates	37
Low tax rates encourage work	39
Low tax rates encourage financially responsible behavior	40
Low tax rates direct resources to more productive uses	42
Chapter 7 Limited Government	45
Intrusive governments reduce freedom	45
Powerful governments promote private sector inefficiencies	46
Expansive governments need high tax rates	48
Governments tend to be inefficient	48
Chapter 8 Government Failure	51
The fallacy of free market failures	52
The size and scope of government	53
Government failures versus free market failures	54
Regulating greed and speculation	55
Regulating the environment	57
